

Press release at CeBIT 2007

## **Identity and access management for Linux/Unix**

Jet-Security for Linux/Unix is a security system for the two operating systems from Jet-Software. The solution is composed of several modules to create the functionality, to run the system, and to report the activities. The splitting into different modules is seen as a further level of security and apparently allows flexible use on different systems without a graphical surface as well. Features spotlighted by the developers include the possibility to restrict the access of defined users and the central administration that is not tied to the function of the system administrator.

## **Fast file sorting package for Unix and Win32**

Jet-Software report new features for Cosort, the company's sort, merge, join, report and convert program for all file types and formats that also allows the input and output of multiple files with different formats. Sortc1, the sort control language program, apparently now also supports full relational joins (matches), SQL condition syntax, database index sequencing for loads, extended Web log and CSV (comma-separated values) input, and HTML output for Web-ready reports. The exhibitors also point to the e-commerce reporting via CLF/ELF manipulation and CSV/HTML input and output. The application is claimed to have the first cross-platform GUI in the sort world. Win32 and Unix Java client users can read and write its data layout and job control files graphically and then launch the relevant programs locally or remotely on NT or Unix servers as workloads and resources dictate.

### **About Jet-Software:**

JET - Software GmbH, founded in March 1986 in Dieburg, develops and distributes software products for MVS, BS2000/OSD, VSE, Stratus FTX and VOS, most UNIX derivatives, Win32 and OS/2. Portations to other systems will be realised by request.

The products of JET are:

- ◆ X-PRESS as compression products
- ◆ ESR as data processing program for BS2000

- ◆ JET-SECURITY Identity- and Access management for BS2000
  - ◆ JET-SECURITY Linux / Unix Identity- and Access management for Linux / Unix
- JET develops, markets and supports these products. JET-Software is also the distributor for Innovative Routines International, Inc. (USA) and distributes CoSORT, as the fastest sort for UNIX, Win32. Additionally, JET-Software is a strategic partner of both Fujitsu Siemens Computer AG and Siemens Business Services. Both companies also use JET products internally.
