WAGNER at the CeBIT 2007**Professional fire protection live and in action**

This year WAGNER will again be present with an own stand (**hall 007, stand D22/12**) in the Centre for Information Technology – CEFIS (www.cefis.de). Many fire protection solutions will be presented live and in action. A demonstration model will show how early air sampling smoke detection systems of the TITANUS[®] family detect fires. The TITANUS RACK-SENS[®], which detects fires in server cabinets very early and – according to the customers requirements – can also extinguish will be shown in two versions. Also in action at the DSR (Das sichere Rechenzentrum, **stand D22/20**) the compact version of the fire prevention system OxyReduct[®] will be presented. In the accessible glass cabin which is fed by OxyCompact the visitors can convince themselves that people can stay within the OxyReduct[®] atmosphere despite the reduction of the oxygen level thus fire can be prevented. Last but not least the 20 metres long WAGNER-Truck will again break its journey in Hannover. In the Truck OxyReduct[®] presentations will be held regularly. It will be placed directly in front of **Halle 7**, vis-à-vis to the press centre.
